

# MIGRATOEBRE

LIFE13 NAT/ES/000237

Let's make the Ebro better  
for **migratory fish**.

## HELP THE FISH TO GET UPRIVER!

### MIGRATOEBRE

is a project to rebuild  
migratory fish populations  
and improve the  
management of the **final  
stretch of the Ebro River**.

Parc Natural  
del Delta de l'Ebre

Generalitat de Catalunya  
Departament d'Agricultura, Ramaderia,  
Pesca, Alimentació i Medi Natural

Co-financed by:

The construction of dams and weirs has made it difficult for fish to migrate upstream and has restricted their spawning grounds. Coupled with the growth in fishery resources in the last century, this has weakened migratory fish populations.

## WHAT CAN YOU DO?

- ✓ **Help** to publicise and raise awareness about the project.
- ✓ **Let us know** online if you **see** any of these species in the river.
- ✓ **Take part in the activities** we will run throughout the project (World Fish Migration Day, photography competition, etc.).
- ✓ Follow us on our **social media**.

## WHERE WILL WE WORK?

The **project** covers the lower stretch of the Ebro River from Flix to the Ebro Delta and the Delta's coastline.

## WHAT WILL WE DO?

- 1 Improve the ecological connectivity** of the Ebro River by adapting all the obstacles in the river's final stretch.
- 2 Recover healthy and sustainable populations** of threatened migratory fish species.
- 3 Start up a pilot project** to restock European sturgeon in the final stretch of the Ebro.
- 4 Put in new fish passage devices** at the Xerta and Ascó weirs.

## MAIN TARGETED SPECIES

Four **migratory fish** from the Ebro River basin will benefit.

**Sea lamprey**  
(*Petromyzon marinus*)

**European eel**  
(*Anguilla anguilla*)

**Twaite shad**  
(*Alosa fallax*)

**European sturgeon**  
(*Acipenser sturio*)
